Considered an invasive weed in most parts of Australia and New Zealand. Its vigour and weight may also bring down trees and it is a potentially serious weed of rainforests and riparian areas. It sends out suckers and produces roots off any stems that touch the ground. This plant also is allergy causing to some people.

Botanical Name: Jasminium polyanthum
Common Name: Sweet Scented Jasmine, Pink Jasmine, Spring Jasmine
Family: Oleaceae
Origin: West China
Height: 6m plus
Habit: Vigorous climbing/creeping plant with tough wiry stems
Flower: Small highly fragrant white flowers that open from pink buds.
Leaves: Glossy compound leave with five to seven leaflets. Leaves are green that change from light to dark green with age.
Climate: suitable to all but coldest areas.
Soil: Moist well drained
Aspect: Full sun/Part shade

Prune: After flowering but removing older branches to the base of plant. It can be hedged or pruned into a ball but will lose its lovely arching habit**.**
Drought/Frost: Drought tolerant, mild frost tolerant.
Control Method: Best form of control is not planting it in the first place but alternatively the use of suitable herbicide is recommended and of course always read the label and follow the manufacturer's MDSS. Best to cut back stems then scrape each stem and paint with the herbicide. See https://weeds.dpi.nsw.gov.au/Weeds/Jasmine for list of suitable herbicides.
